Current user: Respondent who answered Yes for the question "Have you ever tried or experimented with cigarette smoking, even one or two puffs?"

B164. Please provide a brief explanation of the trend in tobacco use by young persons in the past two years or since submission of your last report.
The prevalence of current tobacco smokers among Malaysian adolescents is quite high at 14.2% with more than one in ten 11.7% being current cigarette smokers. The prevalence of current cigarette smokers among adolescents aged 13-15 years was 14.8%. This is comparatively lower than the prevalence found by the Global Youth Tobacco Survey in 2009, which was 18.2%.

B2-B9. HEALTH, SOCIAL AND ECONOMIC INDICATORS

B2. Exposure to tobacco smoke

B21. Do you have any data on exposure to tobacco smoke in your population?
Yes

B22. Please provide details in the space below (e.g. exposure by gender, at home, in the workplace, on public transport).

1. HOME
In Malaysia, More than a quarter (25.9%, 95%CI: 24.6, 27.2) of non-smokers reported exposure to secondhand smoke at home. The prevalence was much higher in rural areas (36.0%, 95%CI: 33.9, 38.3) and among females at 31.3% (95%CI: 29.8, 32.8) compared to respondents in urban areas (22.9%, 95%CI: 21.47, 24.47) and among males (17.1%, 95%CI: 15.6, 18.8). For non-smokers, there was much higher exposure to secondhand smoke among other Bumiputras (33.9%, 95%CI: 30.2, 37.8) and Malays (31.0%, 95%CI: 29.1, 32.7) compared to Chinese (13.2%, 95%CI: 11.4, 15.4) and Indians (17.7%, 95%CI: 14.3, 21.7).

2. WORK PLACE
More than one third (37.3%, 95%CI: 35.3, 39.2) of the respondents were exposed to secondhand smoke at work. The proportion of males exposed to secondhand smoke was almost two times higher than females (48.1%, 95%CI: 45.4, 50.9 vs 24.2%, 95%CI: 22.2, 26.4), whilst no significant differences were observed between respondents with different marital status, ethnic groups and residency.
There was an inverse relationship between the exposure to secondhand smoke at work and educational attainment, whereby approximately a quarter (25.4%, 95%CI: 23.1, 27.8) of the respondents with tertiary education and almost half (43.9%; 95%CI: 31.3, 57.3) of the respondents with no formal education were exposed to secondhand smoke at work.

B4. Tobacco-related costs

B41. Do you have information on the economic burden of tobacco use in your population, e.g. the overall cost of tobacco use imposed on your society?
Yes

B42. Please provide details (e.g. direct (health care-related) and indirect costs and, if possible, the method used to estimate these costs).

A cost analysis study was undertaken to estimate the direct and indirect cost of medical care of three smoking related diseases: Chronic obstructive pulmonary disease (COPD), ischaemic heart disease and lung cancer.

Methodology: A total of 200 patients admitted in five government hospitals in peninsular Malaysia were enrolled between June 2004 and 2005. Smokers above 18 years old and who had smoked at least 100 sticks of cigarettes in their lifetime and diagnosed with three above diseases were included.

Result: The total smoking attributable cost of three selected diseases was 2.92 billion. The burden of these three diseases fall mainly on the health care providers (68%) and patients was 32%.
