## B2-B9. HEALTH, SOCIAL AND ECONOMIC INDICATORS

B2. Exposure to tobacco smoke

B21. Do you have any data on exposure to tobacco smoke in your population?  
Yes

B22. Please provide details in the space below (e.g. exposure by gender, at home, in the workplace, on public transport).  
Results show that 19.7% of adults, aged 15 or more, were exposed to secondhand smoke at home on at least monthly basis, with men having significantly higher percentage compared to women (21.0% vs. 18.4%). Among non-smokers 11.7% of all were exposed to secondhand smoke at home on at least monthly basis (11.3% of non-smoking men and 12.1% of non-smoking women).  
Overall, 9.1% of target population and 7.5% of non-smokers were exposed to tobacco in indoor work areas in the past 30 days. Regarding gender, there was significantly higher percentage of male workers who were exposed to secondhand smoke than female workers both among all adults (11.8% vs. 6.3%) and among non-smokers (9.7% vs. 5.3%).

The labelling provisions were adapted to new scientific evidence. For example, the indication of the emission levels for tar, nicotine and carbon monoxide on unit packets of cigarettes has proven to be misleading as it leads consumers to believe that certain cigarettes are less harmful than others.  
The Restriction of the Use of Tobacco and Related Products Act (Official Gazette of RS, Nos. 9/17 and 29/17) has also legislated plain packaging. Plain packaging for cigarettes and roll -your-own tobacco will be mandatory at the retail level from 1 January 2020.
