B122B. Please indicate the source of the data used to answer question B12:

The State Statistical Committee of the Republic of Azerbaijan; Statistical Yearbook of Azerbaijan 2015 (new), Table: 9.21, Page: 304; [http://www.stat.gov.az/menu/6/statistical\\_yearbooks/indexen.php](http://www.stat.gov.az/menu/6/statistical_yearbooks/indexen.php)

B123. Please provide a brief explanation of the trend in current smoking prevalence by age group in the past two years or since submission of your last report, if data are available.

A significant change in the trend in current smoking prevalence by age group was NOT observed since submission of the last report.

Since the prevalence was almost 100 times higher for men than for women, the possibility on underreporting among female cannot be excluded. Therefore, data in "FEMALES" and "TOTAL" need to be interpreted with caution.

B13. Prevalence of smokeless tobacco use in the adult population (all) (Please provide prevalence data for total adult population, and identify the age considered in B132, e.g. 15 years old and over, 18–64 years; see B132)

## B2-B9. HEALTH, SOCIAL AND ECONOMIC INDICATORS

B2. Exposure to tobacco smoke
B21. Do you have any data on exposure to tobacco smoke in your population?
Yes
B22. Please provide details in the space below (e.g. exposure by gender, at home, in the workplace, on public transport). Among 18 and older, the women more likely than men to be exposed to environmental tobacco smoke (ETS) at home (40.2% vs. 30.2%). ETS exposure at work and public places are higher in men (55.0% and 76.2% respectively), which can be explained by a higher share of employed people among the male respondents and women traditionally less likely to visit public places, especially in rural areas. The 59.6% exposed to ETS either at home, work or public places with men being exposed more frequently than women (67.5% and 52.3% respectively). For both sexes the exposure is more likely to happen at public places than at home or work (59.2% vs. 35.6% and 34.9%). By age groups, ETS exposure tended to be greater in younger ages.

B92B. Please indicate the source of the data used to answer question B91:
Observations at sale points in Baku, the capital of Azerbaijan – December 2015
B93. Please briefly describe the trend in the prices of tobacco products in the past two years or since submission of your last report in your jurisdiction.
The prices of tobacco products have increased approximately twice since last reporting. However, this trend is not due to any specific tobacco control policy. From February to December 2015 the US/AZN exchange rate has changed from 0.78 to 1.55, so the Azerbaijani manat lost half of its value. This was the main reason the prices of tobacco products increased in manats.
