⁵ The “base of the tax” should clearly indicate the tax rate or amount the tax is based on. If the tax is expressed as a percentage (e.g. ad valorem tax), the base of the tax is the actual value of the good that is taxed; for example, 45% of the manufacturer’s price, 30% of the retail price. In this case the “base” is the manufacturer’s price or retail price. If the tax is expressed as an amount (e.g. specific tax), the base of the tax is the volume (number of pieces or by weight) of goods that is taxed. For example, if a tax is US\$ 5 per 100 cigarettes, the amount of tax is US\$ 5 and the base of the tax is 100 cigarettes.

5.3	If you answered “Yes” to question 5.2, please provide details in the space below.
5.4	What, if any, are the constraints or barriers, other than lack of resources, you have encountered in implementing the Convention? <i>(Please refer to Article 21.1(b).)</i>
	There are some political barriers. The smoking prevalense is decreasing and this has been the picture for many years. This could lead to the conclusion that the tobacco problem are about to be solved automatically and that we don't have to put special efforts into the field. It is also difficult for the political and administrative system to accept that the tobacco industry should be excluded for influence in the consultation process of legislative initiatives.
