| 2.8.4 | Please briefly describe the trends in taxation for tobacco products in the past two years or since submission of your last report in your jurisdiction. |
|-------|---|

⁵ The “base of the tax” should clearly indicate the tax rate or amount the tax is based on. If the tax is expressed as a percentage (e.g. ad valorem tax), the base of the tax is the actual value of the good that is taxed; for example, 45% of the manufacturer’s price, 30% of the retail price. In this case the “base” is the manufacturer’s price or retail price. If the tax is expressed as an amount (e.g. specific tax), the base of the tax is the volume (number of pieces or by weight) of goods that is taxed. For example, if a tax is US\$ 5 per 100 cigarettes, the amount of tax is US\$ 5 and the base of the tax is 100 cigarettes.

| | The price per pack of cigars is remarkably increasing, which is not a result of various taxes on production and consumption of tobacco. Recently, the country raised the price of leaf tobacco, main raw material for tobacco production twice or 5 times expensive than in the past; this national intervention is to provide the leaf tobacco-producing farmers with greater national benefit, not to facilitate the decrease in production of tobacco-making factories as well as the increase in the price of cigarette. The Government set the significantly high customs duties on cigarettes imported from the other countries and as a result, the price of imported cigarettes is increased, so the tobacco sale is naturally decreasing as well as the number of smokers. | | | |
