	Current smoking is defined as current daily or occasional smoking, while daily smoking means using at least one cigarette a day.
2.1.1.5	Please provide a brief explanation of the trend in smoking prevalence in the adult population in the past two years or since submission of your last report.
	The difference between the distribution of smoking among men and women is evident. Apparently, the so called historical tendencies of spreading of smoking among sexes have not changed in Georgia so far, due to which among women positive, and among men extremely negative results are maintained. It also has to be taken into consideration that women’s smoking is still a stigmatized subject and it is presumable, that some women keep this habit secret. As a result the received indicator may not reflect accurately the real situation. Nevertheless, there is a slight trend of decrease of smoking in the figures provided in the current report compared to the figures shown in the previous country report of 2008; in average current results show in average 4% less prevalence of smoking in both sexes.

2.1.2	Smoking prevalence in the adult population (by age groups) <i>(If data are available, please provide prevalence data by age group, and identify the age group considered, preferably by 10-year categories, e.g. 25-34, 35-44 years)</i>
