	Latest available data on adult smoking prevalence in Georgia is available from STEPS survey 2011, according to it the difference in smoking rates between men and women is evident. Study results demonstrate that historical trend that men smoke way much more than women in Georgia is maintained. It is also noteworthy that smoking among women in some parts of the country is still stigmatized and it could have been made an impact of study outcomes presuming that women keep their smoking habit in secret. Nevertheless, the latest available results show slight decrease in smoking prevalence in both sexes in past 10 years (2011 data show in average 4% lower rates compared to the data of 2008).

In this case the “base” is the manufacturer’s price or retail price. If the tax is expressed as an amount (e.g. specific tax), the base of the tax is the volume (number of pieces or by weight) of goods that is taxed. For example, if a tax is US\$ 5 per 100 cigarettes, the amount of tax is US\$ 5 and the base of the tax is 100 cigarettes.
